

DG COIN

A Framework for the Financialisation of Being in the Guild Room

A monetary system in which every member begins with the same opportunity to become an example.

Instrument	DG Coin (DGC)
Initial allocation	1,000 DGC per new member
Participation venue	dgmarket
Status	Approved in principle. Minutes pending.

WHITEPAPER 1.0

Office of Hypothetical Fiscal Competence
Satirical working paper. Institutional authority entirely self-assigned.

I / FOUNDATIONS

1 Abstract

DG Coin addresses a longstanding inefficiency within the student economy: activities occur, yet many remain unaccompanied by a token. Individuals attend events, express opinions, and sit on furniture without generating transferable digital assets. This paper proposes the immediate correction of that condition.

Each new member receives one allocation of **1,000 DGC upon signup**. Thereafter, additional DGC may be acquired exclusively through participation on **dgmarket**. No purchase facility, mining programme, staking yield, or supplementary issuance to existing members is available.

The resulting system combines equal initial endowments with unequal subsequent certainty, thereby enabling the orderly conversion of opinions into account balances.

2 Problem Statement

Existing currencies exhibit three fundamental limitations:

- They are not issued by Data Guild.
- Acquiring them generally requires economic activity.
- Their possession conveys no information about whether the holder correctly predicted attendance at a guild event.

DG Coin addresses these deficiencies through a purpose-built infrastructure for a population that already struggles to reimburse sauna expenses.

Unlike conventional monetary systems, which derive credibility from institutions, reserves, or productive capacity, DG Coin derives credibility from a website that loads unusually quickly.

3 Genesis Allocation

Upon registration, every new member shall receive a one-time **Universal Basic Liquidity Event** of 1,000 DGC. This allocation recognises the intrinsic economic value of having successfully completed a signup form.

Let N denote the number of members who have received their initial allocation. Cumulative signup issuance is then:

$$I(N) = 1,000N \text{ DGC.} \quad (1)$$

Unlike Bitcoin, whose issuance is constrained by mathematics, DGC issuance is constrained by the attractiveness of Data Guild to incoming students.

Monetary principle. No additional allocation shall be granted on grounds of enthusiasm, seniority, market losses, or having been “basically right.”

II / MARKET OPERATIONS

4 Participatory Forecasting

Following the initial allocation, acquisition is possible exclusively through participation on dgmarket. Members assume positions concerning future events. Correct assessments result in additional DGC. Incorrect assessments result in an educational experience.

This activity shall be designated **Participatory Forecasting**, and shall under no circumstances be described as gambling within documents authored by this committee.

The distinction is substantive: gambling involves uncertainty, the commitment of something valuable, and the possibility of loss. Participatory Forecasting involves those same operational characteristics, but is accessed through a website maintained by data science students.¹

5 Wealth Accumulation

For interpretative purposes, a member's balance may be expressed as:

$$B_{\text{final}} = 1,000 + \underbrace{F}_{\text{demonstrated foresight}} - \underbrace{C}_{\text{demonstrated confidence}} . \quad (2)$$

The protocol does not guarantee that confidence and foresight will occur in the same participant. Equation (2) is a rhetorical model and shall not be mistaken for accounting logic, particularly by the person implementing the accounting logic.

Members who exhaust their initial allocation retain full access to the community, including the right to observe markets and explain what they would have predicted.

6 Price Stability and Utility

DG Coin employs a proprietary stability mechanism under which:

$$1 \text{ DGC} = 1 \text{ DGC}$$

This relationship has held throughout all internal simulations. The protocol makes no commitment concerning the quantity of sandwiches obtainable with one DGC. Sandwiches constitute an external oracle problem.

The established utility of DGC is participation on dgmarket. Ancillary utility includes checking one's balance, showing it to another member, and subsequently checking it again.

No replenishment facility. The phrase "just one more thousand" does not constitute a valid monetary policy proposal.

¹This distinction has been reviewed by the author of this distinction.

III / INSTITUTIONAL ARRANGEMENTS

7 Account Integrity

Each new member is entitled to one initial allocation. Registering additional accounts to obtain further allocations constitutes **Unauthorised Quantitative Easing**.

Such conduct shall be investigated by the Monetary Integrity Committee, consisting of whoever notices. A second email address shall not, by itself, establish the existence of a second person.

8 Governance

For the purposes of this paper, the governance framework consists of the same four people who organise everything else. All members may submit proposals, which undergo a transparent review process:

Stage	Institutional response
01 / Submission	Proposal is posted in the appropriate chat.
02 / Acknowledgement	A relevant person reacts with a thumbs-up.
03 / Deliberation	Members discuss whether a meeting is necessary.
04 / Resolution	The matter is overtaken by the next sitsit.

No stage of this process creates an entitlement to additional DGC.

9 Strategic Roadmap

Phase I: Foundation. Implement the 1,000 DGC signup allocation and establish the appearance of inevitability.

Phase II: Adoption. Secure a second participant with a different opinion.

Phase III: Institutional maturity. Produce a graph. Refer to movements in the graph as developments.

Phase IV: Consolidation. Rename unfinished features “Phase V.”

10 Risk Disclosure and Conclusion

Principal risks include loss of credentials, loss of perspective, database deletion, and the developer graduating. A rug pull is considered unlikely because the guild room rug is held in place by a substantial table.

DG Coin represents a fundamental transition from a community in which members express opinions freely towards one in which being wrong can be assigned a precise numerical consequence.

The allocation is 1,000. The confidence is unlimited. The relationship between the two remains under investigation.

*We invite all stakeholders to acquire a position
before the position has been defined.*
